

■ Frequently Asked Questions

Does it involve surgery?

No, the NeuroVision treatment does not require any surgery or prescriptive medication.

Am I taking any risk by doing NeuroVision?

No, there are no known risks, side effects or complications associated with the NeuroVision treatment. This treatment has been approved by the United States FDA and has received the European medical CE mark.

How would I know my vision is improving?

Your optometrist will check your vision after every five treatments. You will also be given a personalized treatment card for you to bring home.

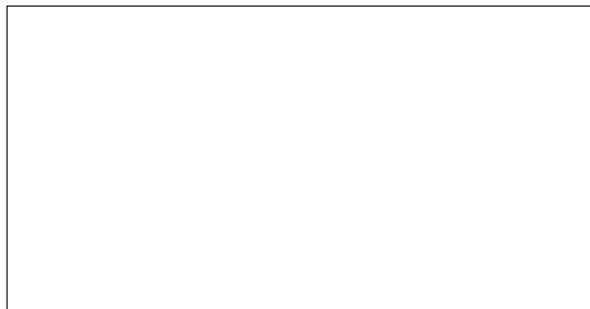

Would my vision improvement be sustainable?

Vision improvement using the NeuroVision treatment is permanent. However, due to changes in the eye, it cannot be guaranteed that your vision will not fluctuate in future.

Can I do the NeuroVision treatment from home?

Yes. You can do the treatment using your personal computer at home. Occasional consultations with your ophthalmologist and/or optometrist are still required to track your progress.

NeuroVision Treatment For Amblyopia

An exciting new innovation requiring no surgery or prescription medications

A revolutionary new technology to improve your vision without surgery

■ Introducing NeuroVision

NeuroVision, our aim is to provide you with a non-surgical, risk-free treatment for the improvement of your vision in your Amblyopic eye (the 'lazy' eye).

To put it in simpler terms, we empower you with the option to improve your eyesight without the use of surgery or prescription medications!

This non-invasive treatment is based on an innovative medical platform technology that has undergone 20 years of research. The proven result - successful treatment of patients in the USA and Singapore, FDA clearance in the USA and the medical CE mark in the European Union.

NeuroVision Inc is a U.S. based company, founded in 1999 and registered in the state of Delaware. Our headquarters are located in Singapore under NeuroVision Pte Ltd.

■ How Does the Treatment Work?

Until NeuroVision, the treatment of amblyopia has only been open to children before the age of 8 years. This is done by covering the 'good eye' with a patch on a daily basis so that the amblyopic eye is utilised.

With NeuroVision, you can now receive treatment for amblyopia for older children and adults. This is done by training the brain to see better and it improves your vision through the enhancement of the brain's processing power. The technology that makes this possible is based on proprietary computer algorithms that are delivered to treatment workstations via the internet.

The NeuroVision treatment is personalised and adapted to the visual needs of each person. The advanced NeuroVision software provides you with a series of interactive exercises carried out in front of a workstation. These

exercises will display a variety of images on the computer screen that restores vision in the amblyopic eye.

Each treatment session will last approximately 20 to 30 minutes and is taken every other day. The duration of treatment is dependent on the progress rate of vision improvement. A person generally undergoes approximately 40 sessions. In most cases, vision improvement is noticed after only 15 sessions.*

*These are average figures, which may vary according to individual progress.

■ Are you Eligible for the NeuroVision treatment?

Yes you are, if:

- Your age is Nine years and above
- You have amblyopia (lazy eye) in one eye
- You are able to attend the treatment sessions regularly without more than a two week break

If you think you are a suitable candidate, please contact us at the phone number which appears at the back of the leaflet.
